

Show off your **new legs** at the beach.

Don't let varicose veins keep you from the Jersey Shore this summer. EVLT can help eliminate them now.

- EVLT is a minimally-invasive laser procedure for the treatment of large varicose veins.
- Unlike surgery, there's minimal scarring and shorter recovery.
- EVLT reduces or eliminates blue, bulging varicose veins, leg pain, swelling and fatigue.

Dr. Peter L. Smith of Vein Treatment Institute of NJ is dedicated to resolving your issues with minimally-invasive treatment options. Please call our office to schedule an appointment.
