

# We perform disappearing acts on **spider veins** and large varicose veins.

At Vein Treatment Center of NJ, we offer two great solutions to make spider veins, reticular veins, and large varicose veins fade away.

- Ultrasound-Guided Sclerotherapy (USGS) is a fast, relatively painless, minimally-invasive method for removing deeper or large superficial veins.
- Visual Sclerotherapy (VS) is the most common treatment for spider veins and reticular veins.

Dr. Peter L. Smith of Vein Treatment Institute of NJ is dedicated to resolving your issues with minimally-invasive treatment options. Please call our office to schedule an appointment.
